This eye-opening text brings together research from behavioral science, neuroscience, and other fields to make a cogent case for emotions acting as a practical framework for living our lives. A dozen basic emotions are analyzed in terms of what causes them, how they change thoughts and behaviors, and the functional value of these responses. Contrary to the common idea of emotions as fleeting occurrences, they are shown as having the potential for lasting impact on moods, thoughts, and behaviors. Intriguing findings assert that even negative emotions such as jealousy and anger can have positive results such as promoting positive goals, and can lead to successful outcomes in overarching domains such as cognition and well-being. Among the topics covered: · How fear and anxiety promote attention and protective behavior. · How sadness and depression promote analysis of complex problems in goal-pursuits. · How happiness promotes processing and attention. · How love promotes relationship development and goal attainment. · How pride promotes sense of self and identity. The Function of Emotions is a valuable resource for students, researchers, and clinicians interested in the psychology and neuroscience of emotions and their function in everyday life. It will attract an interested readership among professionals working in such fields as education, management and leadership, social work, and psychotherapy.

When the Taliban took control of Kabul, Kamila Sidiqi and all the women of Kabul saw their lives transformed. Overnight, they were banned from schools and offices and even forbidden from leaving their front doors on their own. The economy collapsed and young men left the city in search of work and security. Desperate to help her family and support her five brothers and sisters at home, Kamila began sewing clothes in her living room. Little did she know that the tailoring business she started to help her siblings would be the beginning of a dressmaking business that would create jobs and hope for one hundred neighbourhood women and would come to mean the difference between starvation and survival for hundreds of families like her own.

In this urgent time, World on the Edge calls out the pivotal environmental issues and how to solve them now. We are in a race between political and natural tipping points. Can we close coal-fired power plants fast enough to save the Greenland ice sheet and avoid catastrophic sea level rise? Can we raise water productivity fast enough to halt the depletion of aquifers and avoid water-driven food shortages? Can we cope with peak water and peak oil at the same time? These are some of the issues Lester R. Brown skilfully distils in World on the Edge. Bringing decades of research and analysis into play, he provides the responses needed to reclaim our future.

The extractive industries (EI) sector occupies an outsize space in the economies of many developing countries. Policy makers, economists, and public finance professionals working in such countries are frequently confronted with issues that require an in-depth understanding of the sector, its economics, governance, and policy challenges
