Quantitative Structure-Activity Relationships (QSARs) are increasingly used to predict the harmful effects of chemicals to humans and the environment. The increased use of

File Type PDF

Chemquest 14

these methods in
a variety of
areas (academic,
industrial,
regulatory)
results from a
realization that
very little
toxicological or
fate data is
available on the
vast amount of
chemicals to
which humans and

the environment
are exposed.

described may be used to predict the properties of drugs before their development, and to predict the environmental effects of chemicals. These methods also reduce the cost of product development and
