Common rail direct fuel injection is a direct fuel injection system built around a high-pressure (over 2,000 bar or 200 MPa or 29,000 psi) fuel rail feeding solenoid valves, as opposed to a low-pressure fuel pump feeding unit injectors (or pump nozzles). High-pressure injection delivers power and fuel consumption benefits over earlier lower pressure fuel injection. [citation needed] by ...

Common rail - Wikipedia

'Common Rail Direct Injection' is a type of advanced technology used in engine fuel systems. The term 'CRDI' is most commonly referred to diesel engines. In Common Rail Direct Injection, commencement of combustion takes place directly into the main combustion chamber located in a cavity on the top of the piston crown.
