just feels right – no matter that she’s never done any long-distance motorcycle travelling before, and has never even set foot on the African continent. Twelve months later, Heather unloads her Yamaha TT600 at the docks in Durban, South Africa, and her adventure begins. Her travels take her to the dizzying heights of Mt Kilimanjaro and the Rwenzori Mountains, to the deserts of northern Kenya where she is befriended by armed bandits and rescued by Turkana fishermen, to a stand-off with four Ugandan men intent on harm, and to a voyage on a ‘floating village’ on the mighty Zaire River. Everywhere she goes Heather is aided by locals and travellers alike, who take her into their homes and hearts, helping her to truly understand the spirit of ubuntu – a Bantu word meaning ‘I am because you are’. Ubuntu is the extraordinary story of a young woman who, alone and against all odds, rode a motorcycle to some of the world’s most remote, beautiful and dangerous places.

Comparative Approaches to Informal Housing Around the Globe brings together historians, anthropologists, political scientists, sociologists, urban planners and political activists to break new ground in the globalisation of knowledge about informal housing. Providing both methodological reflections and practical examples, they compare informal settlements, unauthorised occupation of flats, illegal housing construction and political squatting in different regions of the world. Subjects covered include squatter settlements in Kyrgyzstan and Kazakhstan, squatting activism in Brazil and Spain, right-wing squatting in Germany, planning laws and informality across countries in the Global North, and squatting in post-Second World War UK and Australia.

Written by renowned data science experts Foster Provost and Tom Fawcett, Data Science for Business introduces the fundamental principles of data science, and walks you through the "data-analytic thinking" necessary for extracting useful knowledge and business value from the data you collect. This guide also helps you understand the many data-mining techniques in use today. Based on an MBA course Provost has taught at New York University over the past ten years, Data Science for Business provides examples of real-world business problems to illustrate these principles. You’ll not only learn how to improve communication between business stakeholders and data scientists, but also how participate intelligently in your company’s data science projects. You’ll also discover how to think data-analytically, and fully appreciate how data science methods can support business decision-making. Understand how data science fits in your organization—and how you can use it for competitive advantage Treat data as a business asset that requires careful investment if you’re to gain real value Approach business problems data-analytically, using the data-mining process to gather good data in the most appropriate way Learn general concepts for actually extracting knowledge from data Apply data science principles when interviewing data science job candidates
