~~Extra Solar Planets lab 9.docx - Make every study hour count~~

Explain how students can use light curves and Kepler's Third Law to calculate the properties of exoplanets, or planets around other stars: The Kepler mission studies the brightness of stars and finds exoplanets by measuring the light curves of thousands of stars. A light curve is a graph of light intensity over time.

~~Extrasolar Planets Naap Answers~~

A lot has changed since 1995. As of August 5, 2019, there are 4103 confirmed extrasolar planets (exoplanet.eu gives a constantly updated count) with many extrasolar planets found that are the size of the Earth or smaller and located at a wide variety of distances from their host star. How did we get from 0 in 1991 to over 4000 less than 30 years later?

~~Extrasolar planets - 24HourAnswers~~

5b is the first exoplanet discovered around the fifth star found to have a planet. Planet Orbital Period (years) Orbital Period (days) Distance from Sun (AU) Distance from Sun (km) Mercury 0.24 years 88.0 days 0.387 AU 57,900,000 km Venus 0.62 years 224.7 days 0.72 AU 108,200,000 km Earth 1 year 365.2 days 1 AU 149,600,000 km

~~Exploring Exoplanets with Kepler~~

Extrasolar Planets Student Guide Answers Solved: Many Of The Extrasolar Planets Known Today Have Be ... the planet, v is the velocity of the planet's orbit, and r is the distance between the planet and the star. Planets close to their stars, like Mercury in our solar system, orbit very quickly. Planets farther away take longer to complete a full orbit.
