Adding Strong Acids or Bases to Buffer Solutions. Now that we have this nice F⁻/HF buffer, let's see what happens when we add strong acid or base to it. Recall that the amount of F⁻ in the solution is $0.66\text{M} \times 0.1\text{ L} = 0.066$ moles and the amount of HF is $1.0\text{ M} \times 0.1\text{L} = 0.10$

both methods described above. You will measure the pH as a strong acid and base are added to the buffer solution, and compare the results with measurements made when a strong acid and base are added to plain water and to dilute buffer solutions. Note: The symbol HOAc is often used to represent acetic
