The threats of economic espionage and intellectual property (IP) theft are global, stealthy, insidious, and increasingly common. According to the U.S. Commerce Department, IP theft is estimated to top \$250 billion annually and also costs the United States approximately 750,000 jobs. The International Chamber of Commerce puts the global fiscal loss at more than \$600 billion a year. *Secrets Stolen, Fortunes Lost* offers both a fascinating journey into the underside of the Information Age, geopolitics, and global economy, shedding new light on corporate hacking, industrial espionage, counterfeiting and piracy, organized crime and related problems, and a comprehensive guide to developing a world-class defense against these threats. You will learn what you need to know about this dynamic global phenomenon (how it happens, what it costs, how to build an effective program to mitigate risk and how corporate culture determines your success), as well as how to deliver the message to the boardroom and the workforce as a whole. This book serves as an invaluable reservoir of ideas and energy to draw on as you develop a winning security strategy to overcome this formidable challenge. □ It's Not □ Someone Else's Problem: Your Enterprise is at Risk Identify the dangers associated with intellectual property theft and economic espionage □ The Threat Comes from Many Sources Describes the types of attackers, threat vectors, and modes of attack □ The Threat is Real Explore case studies of real-world incidents in stark relief □ How to Defend Your Enterprise Identify all aspects of a comprehensive program to tackle such threats and risks □ How to Deliver the Message: Awareness and Education Adaptable content (awareness and education materials, policy language, briefing material, presentations, and assessment tools) that you can incorporate into your security program now

"This report reviews what is known about forgetting as it applies to military tasks. It includes research conducted by the Army Research Institute as well as related work performed by the Air Force and Navy and leading academic institutions. The report distinguishes the memory for knowledge and skill related to procedural tasks, cognitive tasks, and perceptual-motor tasks. Memory for task knowledge has been demonstrated to be quite good. Memory for cognitive skills has been demonstrated to be quite good. Memory for psychomotor skills varies, depending on whether the task is continuous, such as riding a bicycle, or discrete, such as executing the separate performance steps involved in disassembling a rifle. Throughout the report, figures depict the relative sustainment or decay of a skill as reported in the research literature. A final section concerns the factors that influence the reacquisition of a skill after extended periods of nonuse, as might occur during a mobilization."--DTIC.
