contemplative spreads of colour, as Miles discovers the joys of the road. This is a story that children will immediately engage with, while parents absorb the magically nostalgic air and subtle celebration of change and growing up.

Synchronous motors are indubitably the most effective device to drive industrial production systems and robots with precision and rapidity. Their control law is thus critical for combining at the same time high productivity to reduced energy consummation. As far as possible, the control algorithms must exploit the properties of these actuators. Therefore, this work draws on well adapted models resulting from the Park ' s transformation, for both the most traditional machines with sinusoidal field distribution and for machines with non-sinusoidal field distribution which are more and more used in industry. Both, conventional control strategies like vector control (either in the synchronous reference frame or in the rotor frame) and advanced control theories like direct control and predictive control are thoroughly presented. In this context, a significant place is reserved to sensorless control which is an important and critical issue in tomorrow ' s motors.

Trying to keep the death of their parents a secret, Marnie and her little sister Nelly are on their own until several residents in Glasgow's Hazelhurst housing estate suspect that something is not right.

Prolactin Secretion: A Multidisciplinary Approach covers the proceedings of the 1982 symposium on the frontiers and perspective of prolactin secretion through a multidisciplinary approach, convened in Nabor Carrillo Hall of the Natural University of Mexico. The symposium represents a genuine interdisciplinary effort to provide insights into the complexities of prolactin. Separating 24 manuscripts into chapters, this book first discusses studies on the molecular evolution of prolactin (PRL) and the related growth hormones and placental lactogens and the relevance of these studies for biological ...

The advances of basic sciences combined with the perspectives of developmental neurology have recently modified the traditional outlook on the evolution of motor behaviour. The maturation of neuro-anatomic structures is studied nowadays as just one facet of a complex process: the various elements of innate global patterns, the acquisition of antigravitary schemes as well as manipulative and praxic skills, control of posture and gait, ocular motility and motricity, converge to create the present picture of a continuous adaptive interaction between the child's genotype and its environment. This book stimulates the debate and the exchange of concepts between researchers and clinical specialists.

Mr Gumpy has decided to go for a ride in his motor car. It's a nice day and the sun is shining, so off he goes. But he only gets as far as the lane before the children, the rabbit, the cat, the dog, the pig, the sheep, the chickens, the calf and the goat ask if they can come along too. As the motor car and its passengers make their way across the field, the weather begins to turn and the rain is soon pouring down. The tyres cannot grip the muddy ground, so Mr Gumpy asks for volunteers to push the car. But everyone has an excuse, until it gets so bad that they all have to get out and help. Eventually, the sun shines once more as they drive across the bridge - and there's time for a swim on the way home.

window in the city centre and left to die. All this is 'a quiet summer weekend' in the dockland city of Canton and its Art Deco resort town of Ocean Beach. Chief Inspector Sam Hoskins links the investigation of these crimes, but political chicanery hampers him on both sides: on the left is ambitious young Eve Ricard riding to national fame and fortune on 'women's issues, media bias, and insensitive policing'; to the right is the monstrously corrupt councillor and aged razor-boy Carmel Cooney, with his girls and clubs and rackets ...'Strong on city life and the interplay between policemen and local politics' Independent
