Between 1984 and 2004, there are 206 landslide incidents involving water-carrying services in the immediate vicinity of the slopes of concern. Amongst the 206 landslide incidents, 44 were major (i.e. with a failure volume $> 50 \text{ m}^3$). The temporal distribution of the relevant incidents is presented in Figure 1.

REVIEW OF INCIDENTS INVOLVING SLOPES AFFECTED BY LEAKAGE ...

Previous research has reported a high rate of tractor rollover incidents in agriculture that are caused by a steep slope, and safety signs play a key role in warning users against these hazards. In this study, the comprehension of two different graphical representations of slope steepness, in degrees and percent values, was investigated, while also considering the possible effects of previous experience with machinery, history of incidents, and on-farm occupation.

A review of these accidents, and a review of shaft and slope tasks and operations, reveal two important factors: (1) The hazards that confront these workers are generally no different from hazards faced by all other underground or surface miners; and (2) while we recognize that there are some specialized shaft and slope tasks, shaft and slope construction workers perform a number of tasks that are similar to, or the same as, tasks performed by miners already covered by part 48 training.
