In the future world of Scorch, America is run by a "corporacracy." Three conglomerates have taken control not by force but by manipulating common beliefs and values through the media, and particularly by playing on Americans' fears of Big Brother. Consumerism and privatization have run amok in this landscape of flashing screens and subtle brainwashing, a world where even city streets and public schools are run by big business. This is a darkly comic first novel of a dystopian future, with echoes of 1984 and Brave New World.

"As novelist and poet Andrei Codrescu points out in the essay that accompanies this selection of photographs from the Getty Museum's collection, Evans's photographs are the work of an artist whose

temperament was distinctly at odds with Beals's impassioned rhetoric. Evans's photographs of Cuba were made by a young, still maturing artist who - as Codrescu argues - was just beginning to combine his early, formalist aesthetic with the social concerns that would figure prominently in his later work."--Jacket.

Before she can rest in peace, Charlotte Usher must return to the tragic site of her death: High School. On the brink of Dead End graduation, Charlotte and her fellow classmates learn they have one last mission to complete before gaining entrance to the much-anticipated afterlife: Observe one designated teen with an unexplained problem and help said-troubled teen by Prom. For the life of her, Charlotte can't imagine why she has been assigned to help Damen, last year's Homecoming King and her former fatal crush. To make matters worse, her boyfriend Eric is sent to look after her best (breathing) friend Scarlet, who has since ditched her goth girl image for a girlier look that turns more heads than just her boyfriend Damen's. Charlotte would die (again) for love. But when

her only chance at an afterlife means having to face the dreaded, all-too-familiar pains of being invisible, it may be too much for her to handle.

No aircraft is absolutely safe. This book is about Aviation, from learning to fly, becoming a test pilot, flight testing, demonstrating on some of the third world's worst airfields, then specializing in Avionics and finally joining the Board of the UK Civil Aviation Authority, helping to formulate the regulations that the author had spent so many years living by. Many stories are told, including flying with the legendary Howard Hughes when the world thought him a mad recluse, and testing many aircraft including all three V Bombers, an almost unique experience. The book, very well illustrated, makes the point that flying is inherently risky, that regulations always try to quantify acceptable risk, that safety is a cost, and that test pilots have to sell their aircraft and should not try to make an aircraft safer than the rules require. It emphasizes the almost unbelievable changes in aviation in one working lifetime, whilst painting a picture of a much simpler world, now gone beyond recall
