"Thoroughly updated and expanded, 'Fundamentals of Medium/Heavy Duty Page 4/14

Commercial Vehicle Systems, Second Edition' offers comprehensive coverage of basic concepts building up to advanced instruction on the latest technology, including distributed electronic control systems, energysaving technologies, and automated driver-assistance systems. Now organized by outcome-based objectives to improve instructional clarity and adaptability and presented in a more readable format, all content seamlessly aligns with the latest ASE Medium-Heavy Truck Program requirements for MTST." -- Back cover.

'Automotive Computer Controlled Systems' explains the fundamental principles of engineering that lie behind the operation of vehicle electronic systems. Having obtained this knowledge, the reader will be able

to make full use of the diagnostic equipment which is currently available. The book builds on the concepts contained in Vehicle Electronic Systems and Fault Diagnosis and gives clear steps to fault diagnosis and subsequent repair of the vehicle's electronic systems. The author discusses electronics only within the context of the vehicle systems under consideration, and thus keeps theory to a minimum. Allan Bonnick has written articles for several transport/vehicle journals and carries out consultancy work for the Institute of Road Transport Engineers. In addition, he has had many years teaching experience and is ideally placed to write this informative guide.

Beginning with entry-level explanations of the critical systems and advancing to the standard required of ASE L4 and L5 certification testing, this stand-alone book is a firstrate primer in the study of highway truck and trailer brake, suspension, and steering systems. Modular in format, the book's chapters cover basic principles directed to specific, performance-based learning outcomes. Step-by-step photo sequences for many critical shopbased tasks and an emphasis on troubleshooting help learners make the connection between conceptual and hands-on learning.
